# LANTRONIX®

vSLM/SLM – MIGRATION PROCEDURE TO vSLM 4.x.x.x

Restoring your current vSLM configuration on the new vSLM 4.x.x.x (Note: Restoring configuration to vSLM 4.x.x.x is only supported for vSLM versions 3.4 and above)
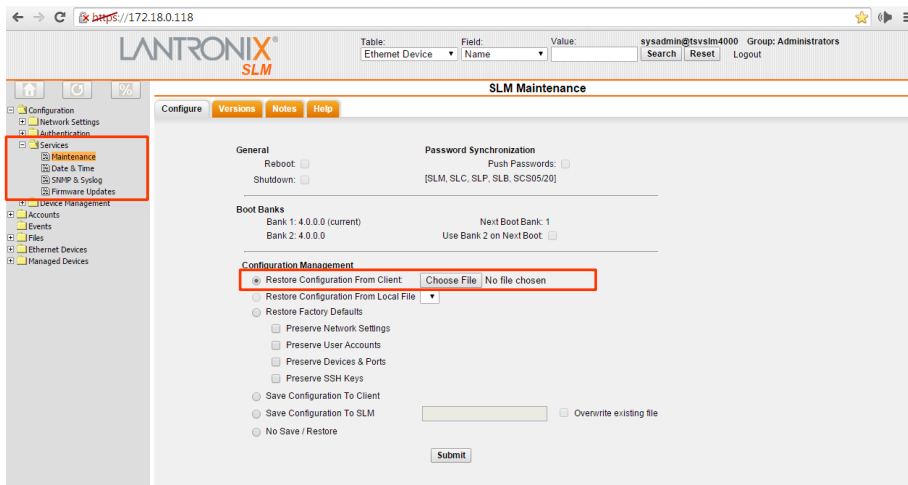

1. Install vSLM 4.x.x.x following the *vSLM Installation Guide* based on your platform.

2. Follow the *vSLM Perpetual License Activation Guide* to convert the trial version to the full version.

3. Remove any SLC 8000 or SLB 882/8824 if they had previously been added.

4. Save the configuration file (vSLM/SLM 3.4 and above) to an external drive of your choice by selecting **To Client** under **Services → Maintenance**.

5. Shut down the previous version of vSLM.

6. Power on vSLM 4.x.x.x and **Restore Configuration From Client** under **Services → Maintenance**.

7. Establish a Secure Channel session to each SLC 8000 and SLB 882/8824 by clicking **Secure Channel** for each unit. Rediscover and detect all SLC 8000 and SLB 882/8824 units.

8. vSLM 4.x.x.x is now ready to use. For further instructions please refer to the *vSLM User Guide*.
