**Centralized Management  
Software for Console Managers  
with  
Powerful Automation,  
Notifications and a Smartphone  
App**

**LANTRONIX**  
CONNECT SMART. DO MORE.

**SLC™ 8000**  
**Advanced Console Manager**

**SLB™**  
**Branch Office Manager**

## **Your company is growing, but your IT team is not.**

There are more locations and more branch offices to manage. You can be at one location but your IT equipment is everywhere. It's your job to keep all this IT equipment up and running, always, because your business depends on it. Network downtime costs your company real money. This is where console managers come in.

Console managers allow you to access, manage and fix IT equipment issues remotely over modems, broadband connections or cellular networks. You can remotely SSH to any IT equipment connected to a console manager to configure it, apply a patch or fix issues, even when your main networks are down. Awesome, but...

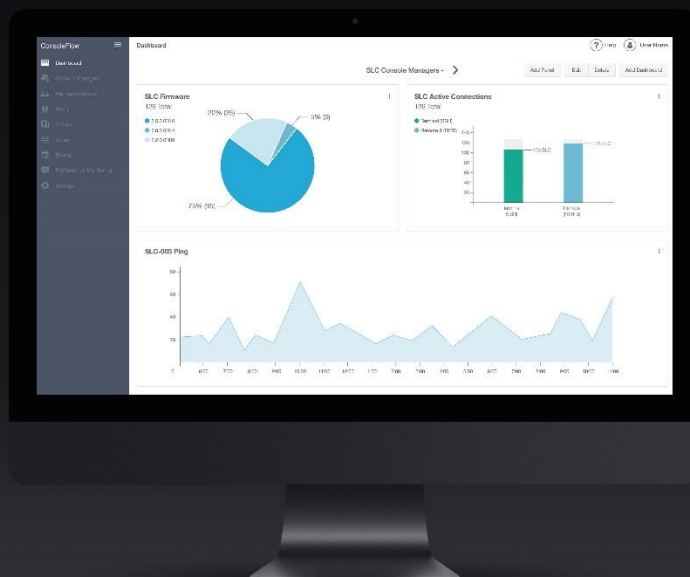

---

You have to keep track of all the console managers you have installed, where they are located and what's connected to them. You still have to constantly monitor the health of IT equipment, console managers and your out-of-band network. But in an ideal world, when stuff breaks somewhere, you want to know right away so that you can fix it (before your boss even knows!).

Do you track your equipment in spreadsheets today? What you need is software that automates all of this for you — the magic wand for out-of-band. It is called Lantronix ConsoleFlow. You can carry it in your pocket too! With the ConsoleFlow mobile app.

---

Lantronix ConsoleFlow is software that aggregates all your Lantronix console managers and connected IT equipment into a centralized directory. You can find any console manager or IT equipment located anywhere using a Google-like instant search. Automated monitoring keeps an eye on everything that matters to you so that you don't have to.

You can connect to IT equipment with a single click. When you are ready to roll an update or a fix, a few clicks are all it takes, whether it is for one device or a thousand. You can integrate ConsoleFlow into your existing workflows using scripts (Python, Expect & Tcl). There is no other software that brings this level of productivity for managing your IT infrastructure over out-of-band networks.

**ConsoleFlow is ready for you. Are you ready for ConsoleFlow?**

## With Lantronix ConsoleFlow You Can:

- Add all your Lantronix console managers and connected IT equipment into a centralized directory
- Locate any console manager or connected IT equipment using a Google-like instant search
- One-click console access to IT equipment, anywhere, anytime from your browser. No apps to install. No VPNs. Just a browser
- Group and role-based access controls per user. Integrates with your existing user authentication infrastructure
- Automated monitoring with powerful rules and notifications. Email, SMS or push - you choose what's best for you
- Roll out updates or fixes to one or thousands of console managers or IT equipment
- Use dashboards to visualize statistics from console managers
- Create and edit scripts (Python, Expect & Tcl) from scratch or from provided templates to customize your data collection and monitoring
- Review historical results for detailed analysis
- Carry ConsoleFlow in your pocket with the ConsoleFlow mobile app
- Get started instantly with ConsoleFlow cloud-edition or deploy on your own network if you wish
