PRODUCT CHANGE NOTICE: SLC Firmware Version 4.3

Dear Valued Lantronix Customer,

Lantronix is pleased to announce availability of updated firmware for the Securelinx™ SLC Console Manager. This release is being delivered as an electronic download only.

Model	Description
SLC	SLC Console Manager: 8/16/32/48 ports, Single AC, Dual AC and Dual DC

UPDATE HIGHLIGHTS

Feature/Enhancement	Description and Benefit
Active Directory Remote Authentication	LDAP remote authentication has been enhanced for interoperability with Active Directory servers, allowing SLC users to be remotely authenticated via Active Directory.
IP Filtering	The former "Firewall" settings (web and CLI) have been replaced by the "IP Filter", for enhanced system security. The IP Filter allows restrictions to be placed on incoming connections to SLC, based on the protocol type, port number or range, and the originating IP address.
Dial-in and Dial-on-Demand Modem Connection Mode	A new modem operating mode has been added, called "Dial-In and Dial-on-Demand", which allows a modem to accept Dial-In PPP connections, when a Dial-on-Demand connection is not established. This setting may be used with both PC Card and external (RS-232) modems.
Additional TACACS+ Servers	TACACS+ Remote User Authentication settings have been updated to add two (2) additional TACACS+ servers, for a total of three (3) TACACS+ servers, in environments where multiple TACACS+ servers are employed.

UPDATE AVAILABILITY

Customers with existing SLCs, electing to take advantage of the new features and capabilities of the v4.3 firmware, may upgrade their units at no additional charge. An upgrade patch, installation instructions, and release notes will be available on **November 30, 2006** from the Lantronix web site at:
